

## FAQ | Albatros Web Service (AWS)

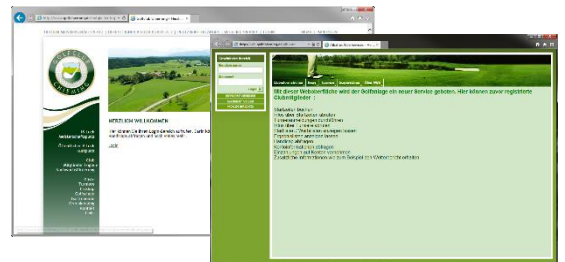

### Possibilities to Integrate the AWS into a Club's Website

1 [1]

There are 3 possibilities to integrate the AWS into a club's website with a Content Management System:

#### 1. Pop-up window opens via separate link

The traditional AWS portal (in the Albatros design) opens in a new window.

Golfclub Chieming e. V.: [www.golfchieming.de](http://www.golfchieming.de)

#### 2. Adjust the portal's color

To some degree, it is possible to adjust the colors of the AWS portal to the club's corporate design. The adjustment is made by Albatros according to the specifications of the club and is calculated on an hourly basis (will take about 2-3 hours).

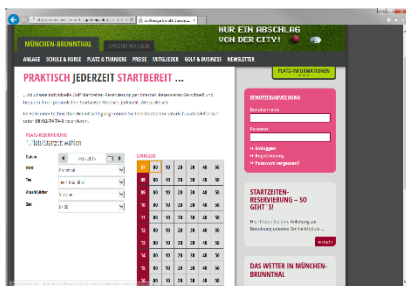

Golfclub Gut Thailing e.V.: [www.thailing.de](http://www.thailing.de)

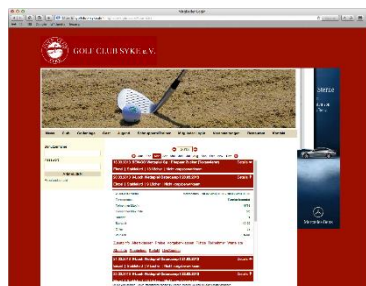

Golfclub Olching e.V.: [www.golfclub-olching.de](http://www.golfclub-olching.de)

#### 3. GWT-integration

AWS elements (such as tournament calendar, tee times, professionals, and login) are available as single elements which can be integrated into the website via content management frameworks with some kind of iframe technology. The elements can be designed responsively. The integration is realized via GWT which is technically demanding and therefore only recommended to experienced web specialists. Customers receive an English manual. Albatros adjusts the GWT elements according to the customer's corporate design specifications. The implementation costs 300 Euro and includes the manual and the color adjustment. Consulting for implementation in individual CMS is not included! Requests on this subject will be separately charged and can be answered only to a limited extent.

GolfRange GmbH:  
[www.golfrange.de](http://www.golfrange.de)

Golfclub Syke e.V.:  
[www.golfclub-syke.de](http://www.golfclub-syke.de)

Golfanlage Zollmühle:  
[www.golfanlage-zollmuehle.de](http://www.golfanlage-zollmuehle.de)
